

BiologiQ Cover

skin protectant

Cover
replaces Aldanex!

- Protects
- Prevents
- Helps healing the skin

For the treatment and prevention of IAD, intertrigo, other moisture lesions and pressure ulcers*

Highly (cost)effective dimethicone-based barrier cream

- Suitable and safe for both healthy and superficially damaged skin
- Lowers the risk of pressure ulcers by preventing moisture lesions
- Reduces shear forces
- Good adhesion to both moist and dry skin
- Can be used on a daily basis or even more frequently
- Excellent complement to best practice cleansing methods
- Does not contain zinc
- Easy to apply, easy to remove
- Ideal for integration into simple, (cost)effective protocols
- Application is painless; experienced as soothing by patients

* Up to category 2

INNOVATION IN (BIO)ACTIVE WOUND MANAGEMENT

Cover skin protectant bridges the gap between preventive skin care and therapeutic wound care

Incontinence is a major problem for healthcare systems worldwide. With life expectancies in the Western world still on the increase, the problem will only get worse. Roughly half of all institutionalized elderly patients suffer from incontinence; urinary, fecal or both. The results are all too familiar to care professionals everywhere: skin irritation, reddening, inflammation, infections and excoriations, all symptoms of Incontinence Associated Dermatitis (IAD). The high correlation between IAD and pressure ulcers makes effective incontinence management a top priority in all care environments. Cover has been specifically designed for the daily skin care of incontinent patients. Therefore it represents a welcome contribution to the cost-effective prevention and treatment of moisture lesions and pressure ulcers up to category 2 and intertrigo.

Cover fulfils three important roles:

1. **Cover prevents** the development of IAD, moisture lesions, pressure ulcers and intertrigo.
2. **Cover protects** the the healthy, irritated and/or broken sk by creating a barrier.
3. **Cover helps healing** by providing protection and an optimum moist environment.

Product description

Cover is a smooth, viscous, greaseless, fragrance-free, allergen-free skin protectant based on Dimethicone. Cover promotes skin repair by optimal protection against moisture-associated skin damage. Cover is also indicated for prevention of skin damage as a result of exposure to environmental factors such as shear forces. Cover is very easy to apply and adheres well to moist and dry skin. Cover is suitable and safe for daily use.

Why Cover is cost-effective

The use of Cover as a structural means of combating moisture lesions and pressure ulcers can bring considerable savings, on various levels.

- It will prevent moisture lesions from forming, or contain them at an early stage
- It helps reduce demand on nursing staff
- There is no (wound) dressing required upon application of Cover on the skin.
- The product is available in two tube sizes, which can contribute further to the reduction of wasted, unused product.

Indications

Cover is indicated for the care of moisture-associated damage of intact or injured skin as a result of frequent fecal incontinence, salivation, perspiration and exudation. It is also indicated for preventing and managing skin irritations like redness and chapping associated with pressure ulcers (up to category 2) and intertrigo.

Contra-indications

Do not use the product when the patient is known to be sensitive to one of the ingredients of the ointment (see Ingredients). Hypersensitivity to one of the ingredients of the ointment can cause redness, irritation and possibly light pain.

Instructions for use

First thoroughly cleanse the entire skin area with a suitable cleanser. Wash or cleanse hands, remove ointment from tube and apply a liberal, thick coating of Cover. The treatment may be repeated as frequently as is necessary.

Always read the package insert of this product.

Local Distributor

Packaging

Cover is available in tubes of **60 gr** (11040) and **120 gr** (11050).
